

IDS ServiceGuard System Monitoring

Our services are geared to address the problems that exist in most mid to large IT organizations and are packaged to meet the needs and budgets of our customers.

Our services are value-added to assist our customers achieve more with less.

...Operate

IDS Systems provides reliable and comprehensive technology solutions that allow organizations to leverage technology as a strategic asset. In order to facilitate their implementation and support, IDS maintains several solutions that are indispensable to the modern technology-enabled operation.

IDS ServiceGuard is a comprehensive solution that manages critical Information Technology infrastructures. As a cloud-provisioned resource, IDS ServiceGuard is a 24 hour solution that monitors important parameters of applications, servers and networked devices. It identifies service status indicators that signify problems in the underlying technology. Once an alert is identified, notification is sent to our central monitoring station and is escalated according to the Service Level Agreement in effect.

Solution High Availability

- **Redundant monitoring platforms-** The core monitoring services are deployed on a highly available server infrastructure using data centre grade technology, Microsoft Windows operating systems, fully supported software components and complete management control. Our monitoring infrastructure is designed with no single point of failure in order to provide continued service 24 x 7 x 365.
- **Redundant Internet connections-** Communication with monitored systems occurs with a secure data interchange transmitted via the Internet. We have multiple Internet connections from various Internet service providers and diverse provisioning media. Should one of our providers have an issue, services are automatically routed through the backup connection.
- **Business Continuity and Disaster Recovery Operations-** Our infrastructure is designed to permit continued business operations in the event of a system or site outage.
- **Regular Human Oversight-** We rely heavily on technology, but technology is not infallible. The monitoring services are themselves monitored by automated processes as well as by individual operators.

Security

- **Personnel Security-** All IDS Systems staff are Canadian Federal Government security cleared to a minimum of Enhanced Reliability and most hold a Secret level clearance or higher. We conduct police background checks on our staff and do not permit access to internal systems to other than employee resources. IDS Systems maintains a "Staff Priority" hiring model. In this regard, all responsibilities related to system monitoring and supporting and monitoring infrastructure are supported entirely by internal staff and never by subcontractors.
- **Corporate Security-** IDS Systems is a Canadian Federal Government security cleared organization at the Secret level. We have implemented internal policies for the safeguarding of information, and in particular client-related information. We also maintain a Canadian Federal Government facility clearance with document safeguarding and retention approval up to the Secret level. All corporate data is maintained within the corporate offices and never leaves Canadian borders.

Customized Service Levels

- **Basic Monitoring-** The basic level of monitoring offered is IDS' ServiceGuard Base subscription. Billed monthly in advance, the service is provided for the quantity of devices requested. Service alerts are provided via e-mail to designated addresses. Basic Alarm Management is provided to ensure that appropriate alarms are reported. IDS personnel do not actively monitor the alarms, however, our resources may be engaged on a fee-based ad-hoc support basis. Ad-hoc support is offered on a best-effort basis during normal business hours.
- **Managed Monitoring-** When the infrastructure being monitored is more critical, the Basic Monitoring service may be augmented to a Managed Monitoring level. Including all of the features of the Basic Monitoring, Managed Monitoring escalates alerts to IDS' internal operators. They follow through directly with the client to inform them of the issues and ensure that they are being addressed. This service provides a first-line triage that ensures that the proper resources address the incident. Full incident tracking is provided until resolution is achieved. Incident ticketing and monthly reporting is provided with this service level. Managed Monitoring is billed on a monthly basis per managed device with a slight premium over basic monitoring.
- **Managed Monitoring & Incident Resolution-** Many organizations employ technology that is too complex to deal with internally. For these environments, the Managed Monitoring & Incident Resolution service level is intended to provide the ability to address issues as they arise. This service will respond to and resolve issues immediately. All features of Managed Monitoring are included in this service level with the addition of the ability to remotely access the managed devices to address technical issues. Depending on the physical location of the client infrastructure, on-site dispatch capabilities may be available. Otherwise, a local support contact may be dispatched when an on-site response is necessary. Managed Monitoring & Incident Resolution is billed on a monthly basis per managed device with a slight premium over basic monitoring with issue resolution billed on a time and effort basis.

Alarm Management

There are many reasons why a device or service would trigger an alarm, however, not all of them require action, and many of them are not critical. It is important to separate more critical alarms from those that are less important. The IDS ServiceGuard monitoring solution provides an initial classification of all alarms based on predefined criteria.

With the Managed Monitoring service, all alarms are reviewed by technical staff to confirm the nature of the alarm and its severity level. If a trend is identified that is indicative of an underlying concern, a manual alarm will be triggered to alert the appropriate response personnel. Conversely, an alarm threshold set at the wrong level or an agent monitoring a parameter that is unnecessary can create undesired alarms that are irrelevant. The Alarm Management provided with the Managed Monitoring service level provides an initial triage of all events reported and escalation of those that require direct attention.

IDS ServiceGuard System Monitoring

Cloud Technology Team

IDS Systems is a full service technology consulting organization. Our team of technical resources account for more than 90% of our staff, including personnel that are highly skilled in most technology products currently deployed. Our affiliation and partnerships with strategic manufacturers and software vendors allows us to escalate issues rapidly and effectively.

Pricing

Current pricing for the IDS ServiceGuard solution is published on our corporate web site. Please see <http://www.idssystems.com> for our current pricing schedule.

- **Base Device Monitoring-** The basic monitoring service is a monthly subscription that provides for the monitoring of 10 devices. Additional agents are added individually as required. Current pricing is available on our website. Discounts are available for sites in excess of 25 devices.
- **Managed Device Monitoring-** Like Basic Monitoring, Managed Monitoring is available at a higher cost per device. An organization may have Basic Monitoring and Managed Monitoring simultaneously, but there is a minimum of five devices for Managed Monitoring.
- **Activation-** Service activation requires a one-time setup fee for the client account. If the client has both Base and Managed Monitoring service levels, an account customization fee is charged to cover the configuration of both service levels. The activation fee can be paid over three months, or up-front. Up-front payments are discounted. Activation fees are non-refundable.
- **Incident Resolution-** All incident resolution is billed on a per-incident basis and is charged based on quarterly-hour increments. Technical resource skill levels vary widely and are priced based on skill level and competency. A service agreement is created that is customized for each client. It defines the skill levels approved to address incidents. Should skills be required that are not included in the service agreement, client approval is sought prior to engagement of the resources. A prepaid block time or credit card billing model is required for Incident resolution. All incident times are tracked and incident details are provided with each occurrence.

Optional Services (Available on demand)

- **License Management**
Track all of your software and maintenance contracts to ensure proper renewal
- **Part Replacement**
Upon notification of a failure, we can source replacement parts immediately for rapid repair, including warranty and non-warranty items
- **System Implementation**
Software and platform configuration and deployment as required

Comprehensive Professional Services Offerings

IDS' Enterprise Services organization offers a broad array of services. Based on a client-centric flexible approach, organizations of all sizes can acquire these services precisely when they are required.

All engagements involve the deployment of IDS' Professional Services team. Each highly skilled member possesses the knowledge and experience to effectively meet client needs. Team members may include an IDS Project Manager, Technology Architects and one or more Systems Engineers. Resources are deployed as required throughout the engagement to ensure that project objectives and deadlines are met.

Contact your account representative for details on how to build a customized service offering for your organization.

About IDS Systems

IDS is an unbiased technology service provider that resells select proven manufacturers' products. As such, we can offer our clients objective advice. We are able to get to the root of heterogeneous system problems with tact and professionalism.

IDS provides enterprise-calibre technology consulting services to support information technology infrastructures and data centres. Our qualified System Engineers are trained in industry best practices and experienced with most Tier-1 data center technologies and enterprise-calibre niche solutions.

**For services for your data centre, just think IDS.
Get it done right – the first time.**
